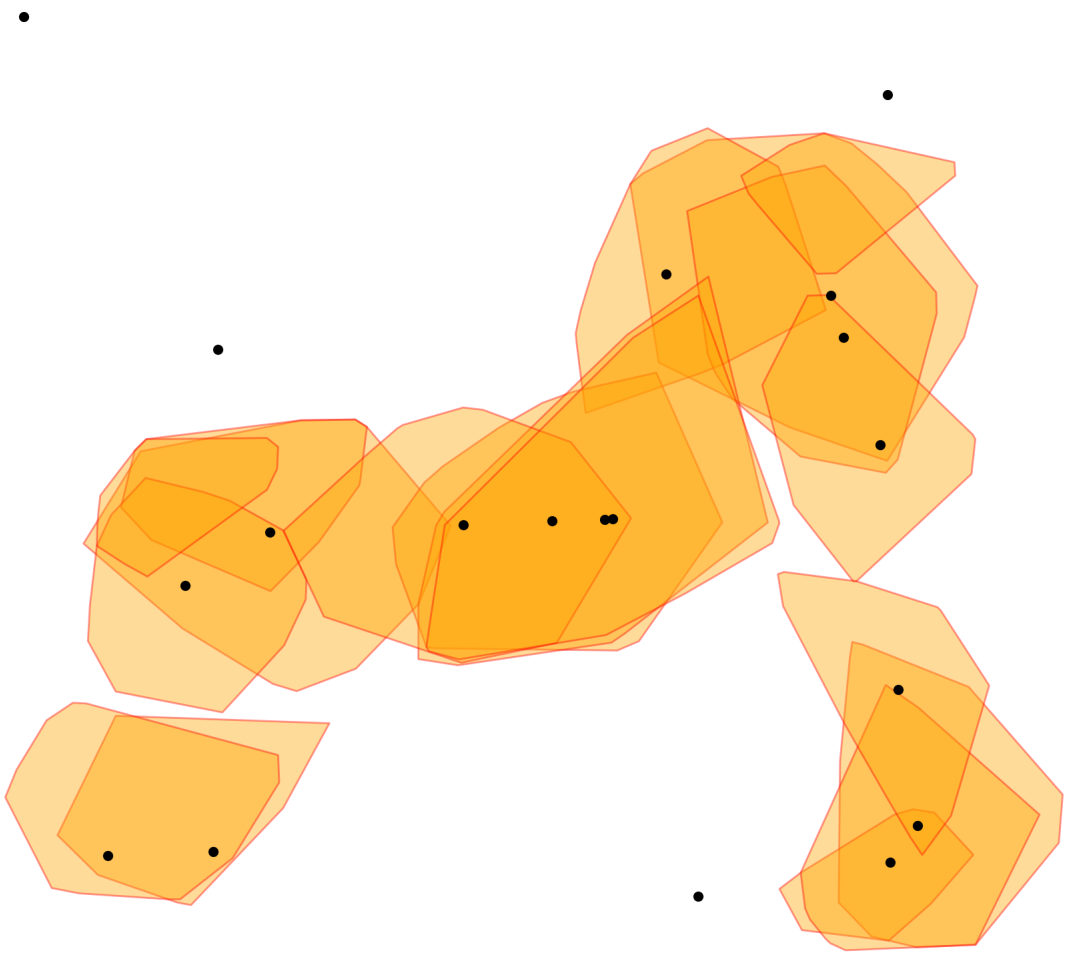
Starbucks Catchment Area & Market Analysis

Target Area: Riverside, California

1. Executive Summary

This report identifies underperforming Starbucks branches based on a 3-minute drive-time demographic coverage area using street network routing (OSMnx). By analyzing the topological connectivity and real-world travel times, we estimate the exact market reach for each location.



2. Store Closure Recommendation

Recommended for Closure: **Store VONS #2659 - STARBUCKS** (3520 RIVERSIDE PLAZA DR, RIVERSIDE, CA)

Estimated Catchment Population: **6927 residents** within a 3-minute drive.

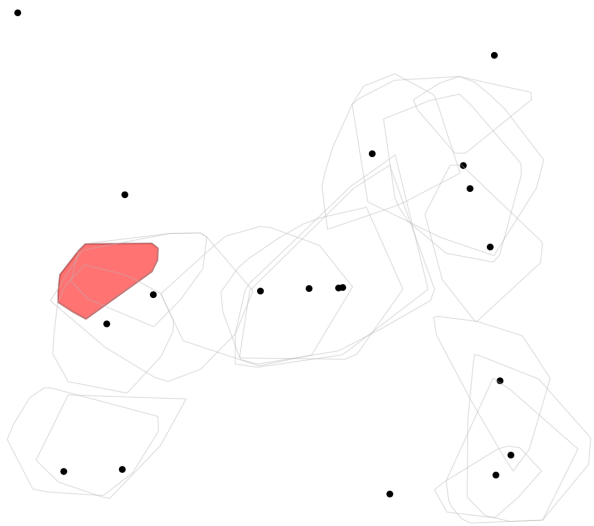
Share of all measured store catchment population: **1.6%**.

Analysis indicates this location suffers from significant network isolation or localized competition, resulting in the smallest reachable customer base in the Riverside region.

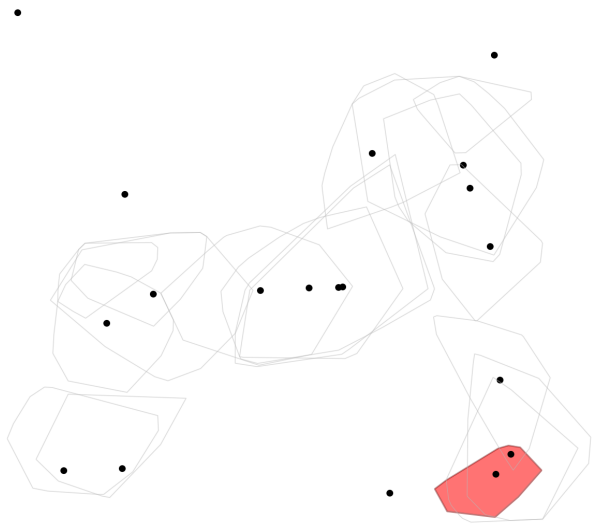
3. Bottom 3 Candidate Service Areas

Each map isolates one of the three weakest 3-minute catchments. These are the locations a manager would inspect first before making a final lease or closure decision.

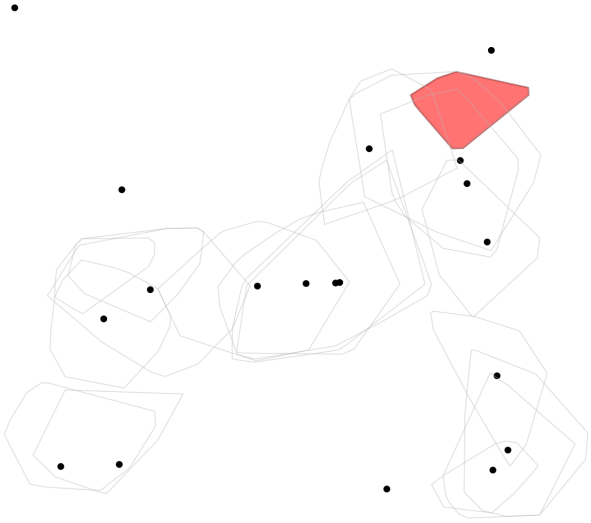
Bottom 1: VONS #2659 - STARBUCKS (6927 residents)



Bottom 2: STARBUCKS #11463 (8057 residents)



Bottom 3: STARBUCKS #6616 (8095 residents)



4. Detailed Market Performance Data

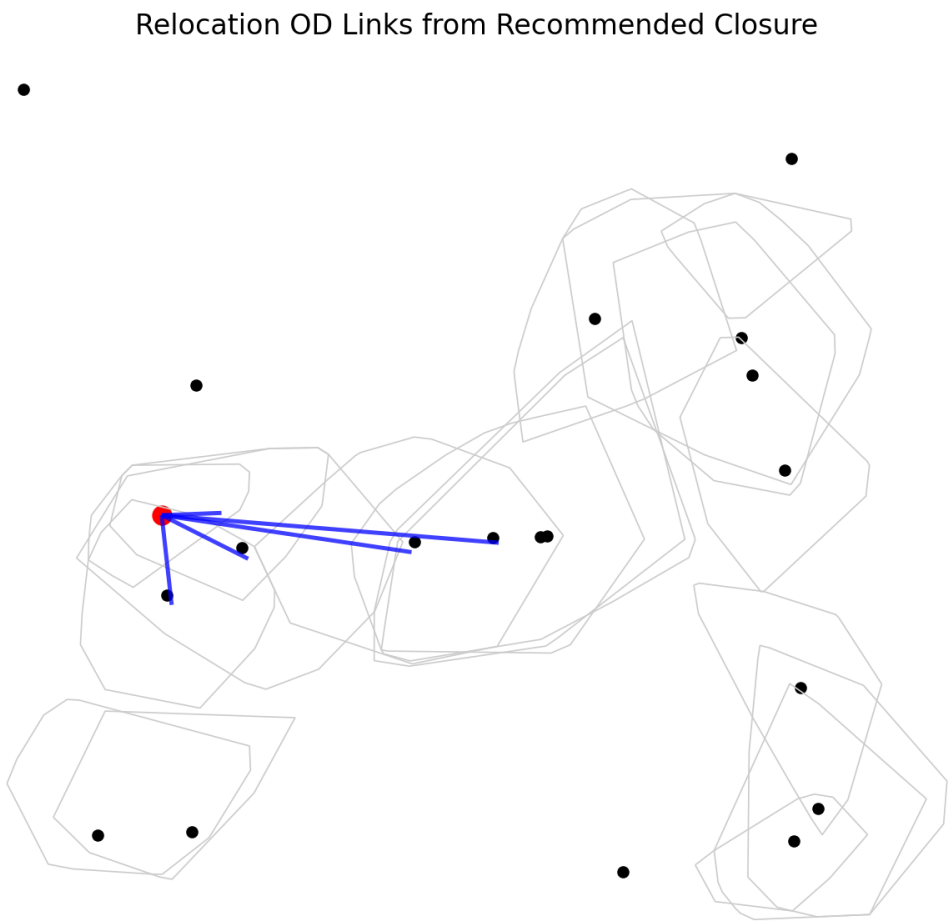
Bottom 3 Stores by Population Coverage

Store ID	Address	Population	Share
VONS #2659 - STARBUCKS	3520 RIVERSIDE PLAZA DR, RIVERSIDE, CA	6927	1.6%
STARBUCKS #11463	16810 VAN BUREN BLVD, RIVERSIDE, CA	8057	1.9%
STARBUCKS #6616	3782 TYLER AVE, RIVERSIDE, CA	8095	1.9%

5. Origin-Destination Matrix: Relocating Customers

Drive time (minutes) from closed Store VONS #2659 - STARBUCKS to alternative branches:

Destination Store ID	Travel Time (Mins)
STARBUCKS #5685	2.05
STARBUCKS #11025	3.37
STARBUCKS #5369	4.06
STARBUCKS COFFEE #11236	6.5
STARBUCKS #2892	8.09
STARBUCKS COFFEE #10224	8.76
STARBUCKS #7974	9.13
TARGET ARLINGTON T-0291 STARBUCKS	9.14
STARBUCKS ARLINGTON & 91 #6977	9.33
STARBUCKS #10889	10.91

6. Relocation Link Map


The blue lines sketch the nearest alternative stores from the recommended closure. This complements the table by showing whether replacement trips are spatially practical.
